FOR IMMEDIATE RELEASE

CENTPBX RELEASES FREE TELEPHONE PBX SOFTWARE SYSTEM

New York, Oct. 21 – New York Based Telephony Systems Group CentPBX Corporation releases their initial version of a Free Telephone PBX Software System to the general public. The Software Distribution provides PBX Telephone System functionality on standard PC Hardware. The CentPBX software Package allows businesses and consumers alike to provide Telephone System Functionality rivaling systems offered by large Telephony and Communications vendors for free.

The CentPBX project is an Open-Source Software solution that provides a completely automated installation and configuration of various telephony technologies that will enable businesses to implement and manage Telephone System Infrastructures within their organizations for little or no cost. Telephone handsets available from a multitude of vendors including, but not limited to Polycom, Aastra, Snom, Grandstream, and Cisco are fully compatible with the software.

CentPBX is designed to integrate fully with most public telephone network technologies offered by Major Telecommunications Carriers worldwide. Scalability of the CentPBX infrastructure allows the system to manage up to many thousands of telephone handsets across an unlimited number of geographic locations.

Standard and Advanced Telephony System Features such as Redundancy, Advanced Call Routing, Queuing, and Voice Over IP (VOIP) Technology support allow implementers of the software package to create a telephone system that will meet or exceed the solutions offered by large telephone systems vendors for no more than the cost of commodity PC hardware potentially saving businesses Hundreds of Thousands or Millions of dollars.

“The CentPBX Corporation is dedicated to providing a completely Open-Source Telephony Based Communications solution for free to the general public. It is our belief that telecommunications solutions based on Open-Source Technologies are the future. We are

dedicated to creating a truly open platform for Communications and Telephony.” , states Percy Kwong, a founding member of the project.

CentPBX implements technologies including CentOS, Asterisk, and FreePBX to accomplish the automated installation and management of a truly Open-Source Communications infrastructure.

While the average Enterprise-Class Telephone System Implementation can exceed one Half a Million (500,000.00) dollars for a large company, CentPBX can provide that same functionality for less than one-tenth (1/10) the cost. Service Charges for maintenance of such telephone systems are eliminated with CentPBX by allowing customers to configure and manage their telephone systems through an easy-to-use web-based management system.

CentPBX is a New York based corporation founded by AbTel Inc., i9 Technologies Inc., Schmooze Communications Inc., Laity-Fields Inc., and Virtutel Communications Inc.
